

Luxpred

PRODUCT DEMO

Discover Luxpred in action

Order exactly what you need, at the right time — thanks to AI that learns from your own sales. No more stockouts, no more overstock.

Stockout = lost sale. Overstock = idle cash.

For merchants who
want to **sell more**

7 days free
No credit card

Ordering on instinct costs you money

Most merchants order on instinct. It works — until your range grows, sales swing with the seasons, and gut feel starts costing you money in two directions at once.

Stockout = lost sale

When a sought-after product is out of stock, the customer leaves empty-handed — often to a competitor, and often they don't come back. Every empty shelf is a sale you'll never make.

Overstock = idle cash

Order too much and your money sits on the shelf instead of in your account — sometimes for months, sometimes never selling at all.

The solution: Luxpred analyzes your past sales with artificial intelligence and tells you exactly **what to order, how much, and when**. No spreadsheets, no guesswork.

Luxpred at a glance

Three capabilities, one app. No technical skills required.

Stockout prediction

The AI anticipates your stockouts before they happen.

Optimised orders

Precise recommendations: what to order, how much, and when.

Zero technical skills

Ask your questions in plain language; the assistant does the work.

How does it work? In 3 simple steps

01

Configure

Tailor Luxpred to your business — in one minute.

02

Train the AI

The AI learns from your sales history.

03

Predictions

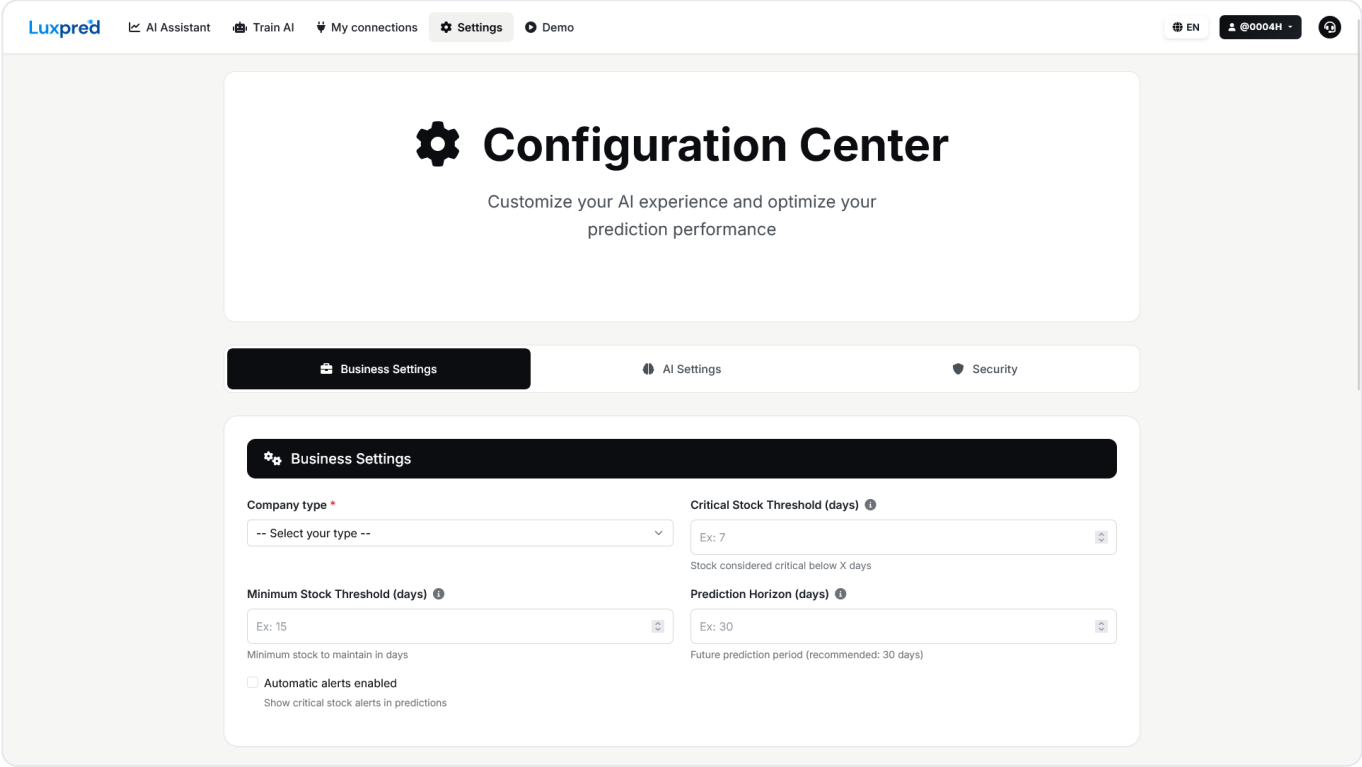

Get clear recommendations on what to order.

STEP 1

1 Configure your business settings

First, you tailor Luxpred to your business. You choose your business type and set a few thresholds — all expressed in days of stock coverage. This is done once and takes barely a minute.

Settings → Business Settings

The Configuration Center: business type, stock thresholds (in days), and prediction horizon.

Setting	What it means
Business type	Retailer, wholesaler, e-commerce — the AI adapts to your sector.
Critical stock threshold (days)	When to raise a red alert. E.g. 7 = "flag it when under a week of stock remains".
Minimum stock threshold (days)	The safety buffer you always want to keep. E.g. 15 days.
Prediction horizon (days)	How far ahead to plan. Recommended: 30 days.
Automatic alerts	Show critical-stock alerts directly inside your predictions.
Weather data	The AI cross-references your sales with local weather forecasts to anticipate demand peaks.

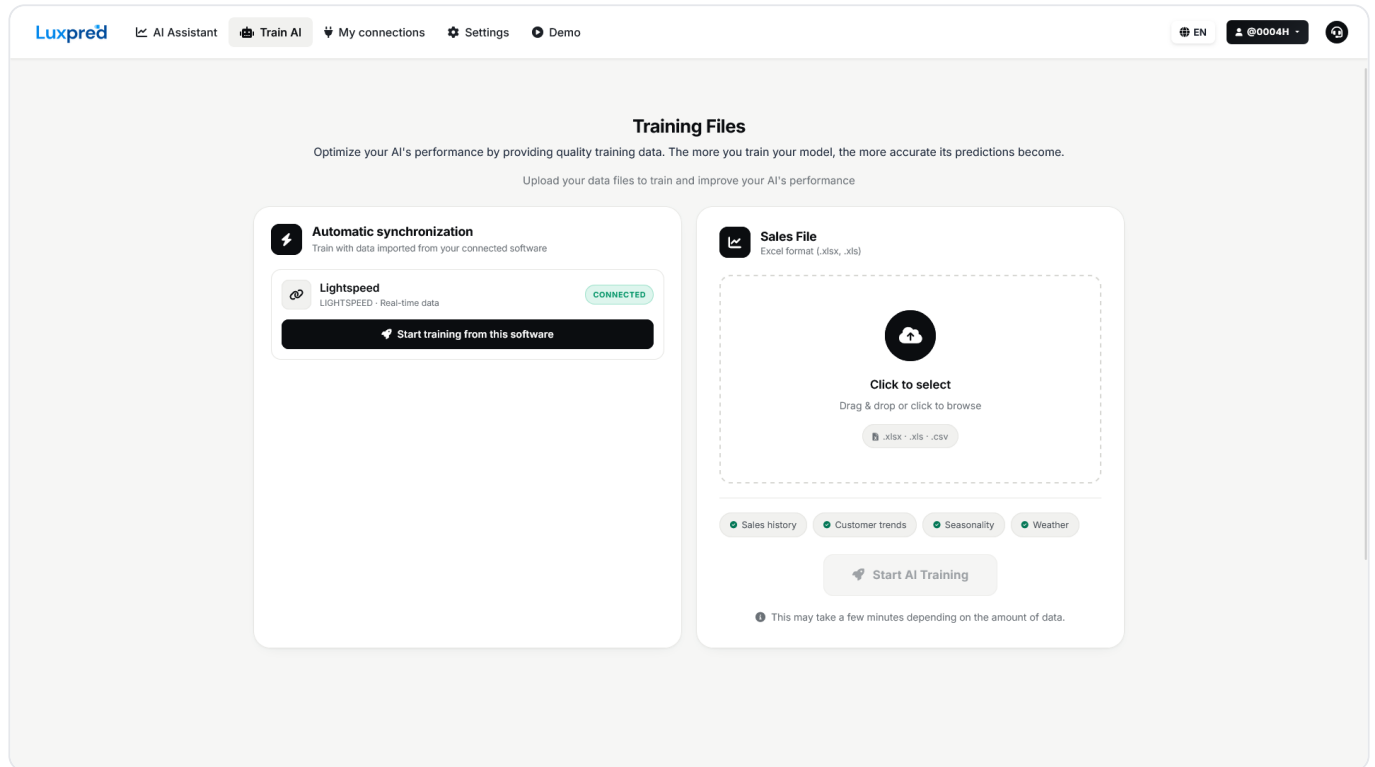

New user? On first login, a guided setup assistant appears with the same fields — so you never face a blank screen.

STEP 2

2 Train your AI

Next, you give the AI something to learn from: your sales history. Two easy options — then you click "Start AI Training".

Train AI → Training Files

Two ways to train: automatic sync from a connected tool (left) or a sales-file upload (right).

Option A — Connect your software

One-time connection to your POS / e-commerce tool; your sales sync automatically, with no manual export.

Shopify

WooCommerce

Square

Lightspeed

Hiboutik

SumUp

PrestaShop

Option B — Upload a sales file

Drag & drop an Excel or CSV export of your past sales. Luxpred auto-detects the columns.

.xlsx

.xls

.csv

The AI studies your **sales history**, **customer trends**, **seasonality** and even the **weather**, then builds a model tailored to your shop. Training usually takes just a few minutes.

The more sales you provide and the more often you retrain, the sharper the predictions get.

3

This is the payoff. From the AI Assistant, you pick one of three modes depending on what you need right now.

AI Assistant — chat with your stock

Example questions:

Analyze the stockout risks

How is my overall stock?

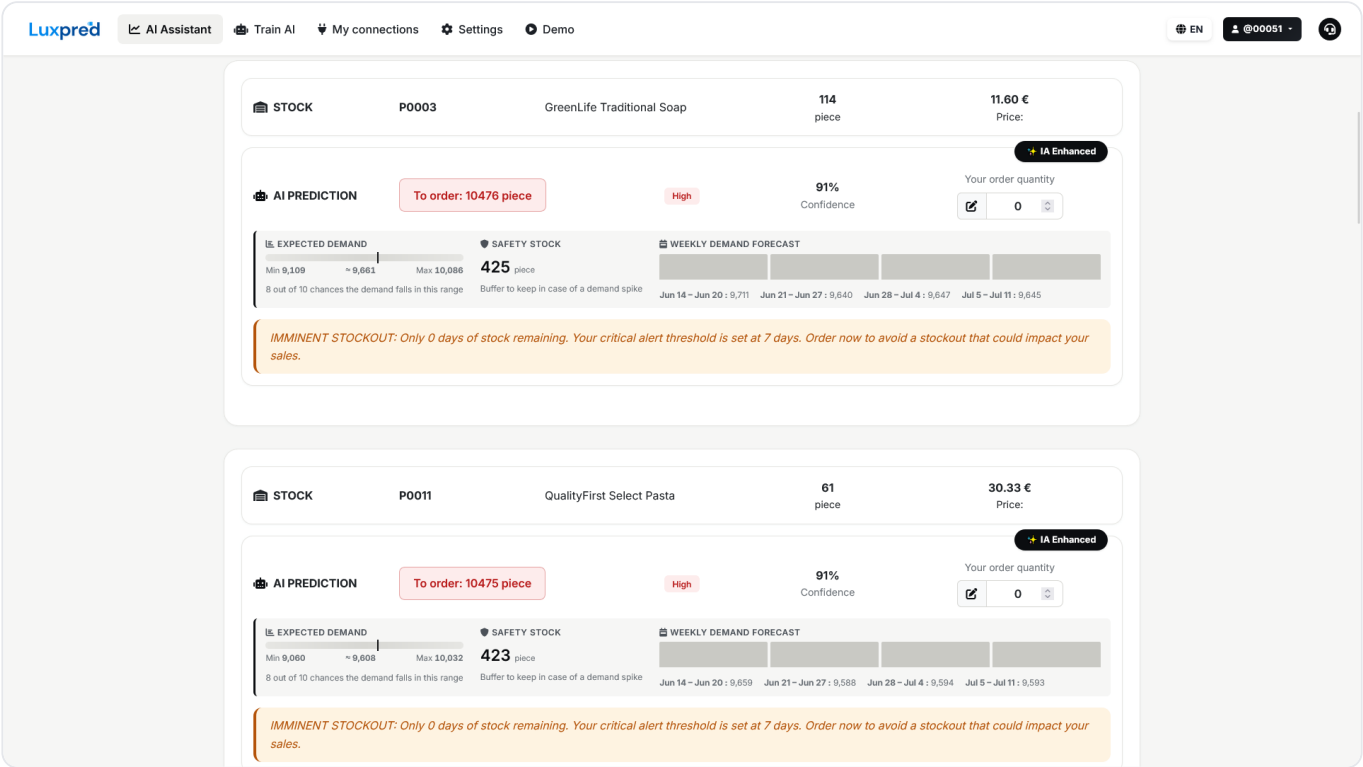

How is my overall stock?

The AI analyzes your stock and answers your questions — with shortcuts and live stats (products analyzed, critical items, average confidence).

Full Prediction — scan your whole stock

Import your stock file and set the horizon. Luxpred scans every product: it detects **imminent stockouts**, spots **overstock** that's tying up your cash, calculates **turnover**, and forecasts the weeks ahead. For each product you get a clear order quantity, a confidence level, and a safety buffer.

Full Prediction — results

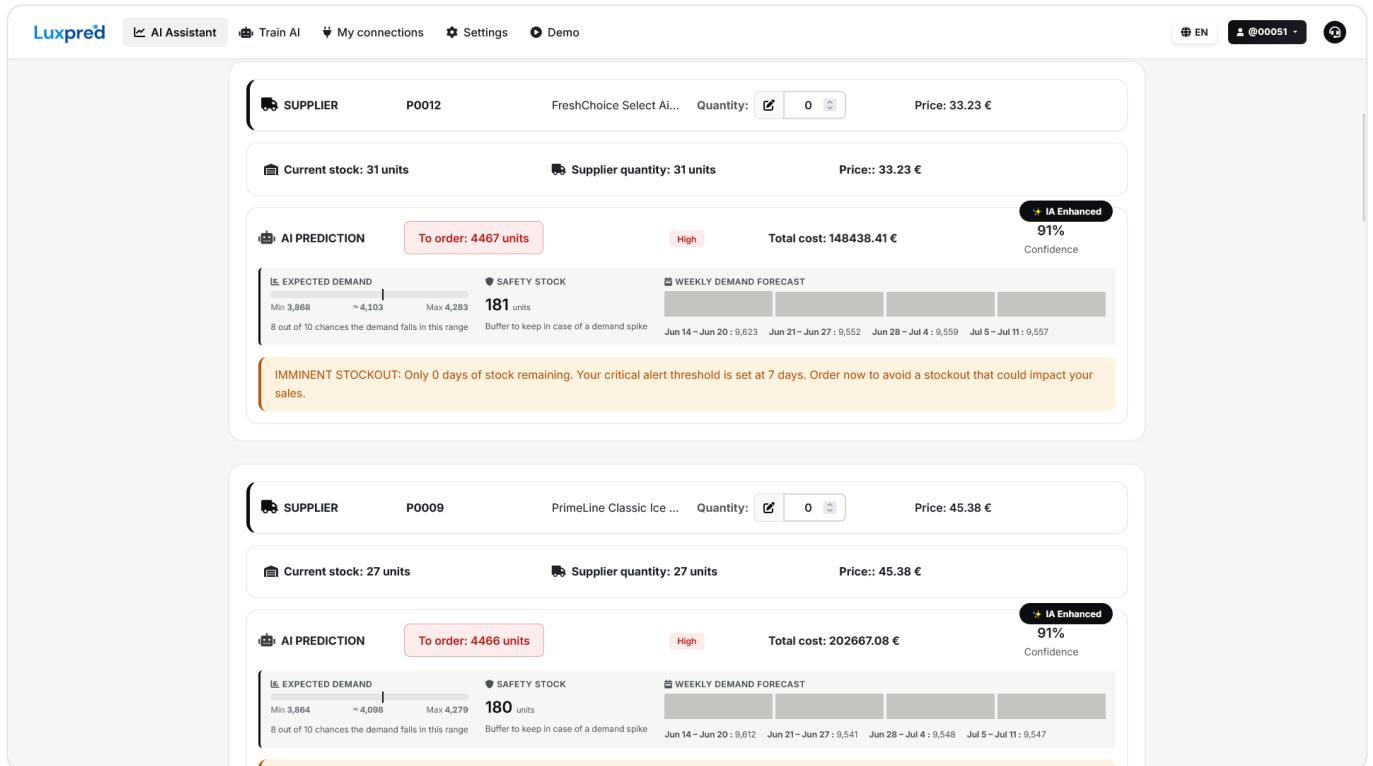

Per product: recommended order quantity, confidence, expected demand, safety stock, weekly forecast, and stockout alerts.

Quick Analysis — size an order from a supplier catalog

Got a new supplier catalog or arrival list? Add the supplier file plus your current stock, and Luxpred tells you exactly **how much of each item to order — and the total cost**. You order with numbers, not gut feel.

Quick Analysis — results

For each supplier item: how much to order, the confidence, and the total cost.

How to read a prediction

Every prediction uses the same clear card. You understand it at a glance.

Element	What it means
To order	The recommended quantity to order now.
Confidence (e.g. 91%)	How sure the AI is about this recommendation.
Expected demand (min · ≈ · max)	The likely range of sales — "8 out of 10 chances demand falls in this range".
Safety stock	A buffer to keep in case of a demand spike.
Weekly demand forecast	Predicted demand, week by week.
Imminent stockout	Appears as soon as the days of stock left fall below your critical threshold.
Your order quantity (editable)	You can always adjust the AI — Luxpred recommends, you decide.

Every recommendation comes with a confidence level and a demand range. You're never asked to trust a "black box" — and you always stay in control.

THE BENEFITS

Why choose Luxpred?

A tool designed for merchants. Simple, secure, and effective from day one.

You are completely anonymous

We don't know your identity, your product names, or your prices. Only your email is stored, for login. Your business activity stays 100% private.

No expertise needed

No need to master Excel or understand algorithms. Ask your questions in plain language; the assistant explains everything clearly.

Ready in minutes

No complicated installation, no training. Create your account, import your sales, and you're ready. Everything is done online.

Anticipates your stock needs

The assistant looks at your sales from the past months and tells you how much to order for the weeks ahead. No more manual calculations.

Reduce your losses

Fewer products sitting too long, fewer customers leaving empty-handed. More profit on every order.

Hosted in Europe, GDPR compliant

Your data is on secure European servers and complies with GDPR and Luxembourg data-protection standards.

PRICING

Choose your plan

Start for free, then upgrade to a paid plan if you want to go further. Same security, same confidentiality, whatever your plan.

7 days free trial

No credit card required · Instant access · Cancel anytime, with 1 click

★ Professional is the recommended plan. Prices exclude VAT. Yearly billing gives free months.

FREQUENTLY ASKED QUESTIONS

Good to know

Is my data safe?

Yes. Your files are processed temporarily for the analysis, then deleted. Luxpred doesn't know your identity, your product names, or your prices — only your email is kept, for login. Hosted in Europe, GDPR compliant.

What file format do I need?

Excel (.xlsx, .xls) or CSV, with dates, product references, quantities and prices. Columns are detected automatically.

How fast will I see results?

AI training usually takes a few minutes. Your predictions are available right after.

Do I need to be technical?

No. If you can drag a file and ask a question, you can use Luxpred. Nothing to install — it all runs in your browser.

Can I cancel?

Yes, anytime, in one click. No credit card is required for the 7-day trial.

Which languages is Luxpred available in?

English, French, Luxembourgish, Dutch and German.

GET STARTED

Ready to optimize your stock?

Test the assistant on your own data and see for yourself if it works for your business. Starting costs nothing.
